

We Claim:

1. An insert for a door storage compartment, the insert comprising:

a frame forming at least one chamber and having a first side and an attachment device disposed at said first side, said attachment device provided for attaching to the door storage compartment, said frame having a second side with at least one indentation formed therein for fixing an object located outside of said frame.

2. The insert according to claim 1, wherein said second side is disposed opposite said first side.

3. The insert according to claim 1, wherein said frame is flexible, at least in an area of said second side.

4. The insert according to claim 1, wherein said frame has a third side and is rigid at least in an area of said third side, said third side oriented transversely with respect to said first side.

5. The insert according to claim 1,

wherein said frame forms at least two chambers; and

further comprising a web separating said two chambers from one another, and said web is connected to only one of said first and second sides.

6. The insert according to claim 5, wherein said web has an unconnected end which is not connected to said first side.

7. The insert according to claim 6, wherein said web is connected to said indentation formed in said second side.

8. The insert according to claim 6, wherein said unconnected end of said web can be brought into contact with said first side by reversible elastic deformation of said frame.

9. The insert according to claim 6, wherein said web has a greater wall thickness than said frame.

10. The insert according to claim 5, wherein said frame has a bottom and is open at said bottom, at least in a vicinity of said web.

11. The insert according to claim 1, wherein said frame forms chambers of different sizes

12. A door storage compartment for a refrigerator, comprising:

a door storage body; and

an insert containing a frame forming at least one chamber,
said frame having a first side and an attachment device
disposed at said first side, said attachment device provided
for attaching to the door storage body, said frame having a
second side with at least one indentation formed therein for
fixing an object located outside of said frame.
